Vegetable Root Crop Topper RCT-M

The root crop topper RCT-M tops or cuts in half root crops with minimal force. Examples of these products are celeriac, pumpkin, white cabbage, red cabbage, cassava, and turnip. The RCT-M is perfectly suited for even the hardest products.

Cutting vegetables and fruits

The product is placed in the V-shape of the table so the product will stay in its place. Subsequently the product will be topped or halved by bringing the knife down. Because of the leverage of the knife this will require relatively little force.

Technical data

Dimensions	1050 x 590 x 1070 mm
Weight	31 kg including knife
